(54) Title: SEMICONDUCTOR DEVICE FOR EMITTING LIGHT AND METHOD FOR FABRICATING THE SAME

(57) Abstract: A semiconductor light emitting device includes a package (5) having two or more terminals, two or more semiconductor devices (1,2) mounted in the package to emit lights each having a predetermined wavelength, and a molding unit (3) mixed with a phosphor. The phosphor is excited by the lights emitted from the semiconductor devices to emit light having a wavelength different from those of the lights emitted from the semiconductor devices.
